

Intelligent Document Processing for Insurance Claims

Background

- ❌ SafeGuardNZ processes **thousands of claims** monthly.
- ❌ Each claim requires careful review of **multiple document types**.
- ❌ **AWS is already in use** for secure document storage and processing.
- ❌ The team is bogged down by **manual review** process, causing **customer dissatisfaction**

With Our AI-powered Platform

- ✓ **Reduce** back and forth communication time
- ✓ **Eliminate** errors with system calculated amount
- ✓ **Replace manual reviewing** with **automatically** classifying files, extracting key details and validating policies
- ✓ Provide **real-time feedback** to **improve** customer experience

Description

The image shows a damaged BMW vehicle that appears to have been involved in a collision. The front end of the car is significantly damaged, with the bumper, grille, and headlights all showing signs of impact. The hood is also dented, indicating a high-impact collision. Based on the extent of the damage, this appears to be a significant claim for the insurance company to assess.

Explanations

The policy is inactive, capping the confidence score at 0.2 or below.

Critical evidence like the police report and photos of the vehicle are missing.

The claim does not align well with the car insurance policy based on the low domain relevance score.

Missing Information

Police report to verify the incident details

Photos of the damaged vehicle to assess the extent of the loss

Claim Approved

Email Body

I'm pleased to inform you that your claim (ID 68ccc9e057c124f49145ba4) has been approved. The incident you described, a collision between your Honda Civic and a Holden Colorado Ute that occurred on April 30, 2025, has been carefully reviewed, and we have determined that your claim is valid.

The details you provided indicate that the collision occurred around 20:15 in the dry, well-lit Saint Georges Bay Road area of Auckland. Your Honda Civic sustained significant damage to the front left quarter panel, front bumper, and left headlight assembly, as well as possible suspension damage. The total estimated repair cost is \$1,445, including parts, labor, and taxes. The driver of the Holden Ute was issued a traffic infringement notice for careless driving.

Conclusion & Future Development

The project is a cloud solution designed to streamline the insurance claims process by automating document processing, reducing human error, and improving customer experience. For future work, we'd like to:

- Implement mobile application
- Add push notifications for claim updates
- Multilingual support
- Improved response time
- Enhanced agent accuracy
- Integration with external data sources

Benefits

- ✓ **Scalable architecture** handles volume spikes effortlessly
- ✓ **Faster processing claims** with **improved accuracy**
- ✓ **Reduced operational costs** through intelligent automation
